

• A Presentation on A Good Presentation

by

Dr. Shafi K.A
Principal, MESITAM

A Practical Guide for Students and Professionals

A good presentation needs to be

- Clear
- Simple
- Consistent
- Structured

Theme : Clarity

- Contrast

Is this the one you like?

Is this the one you like?

Is this the one you like?

Theme : Clarity & Simplicity

Color Color

- Using a font color that does not contrast with the background color is hard to read
- Using color for decoration is distracting and annoying.
- Using a different color for each point is unnecessary
 - Using a different color for secondary points is also unnecessary
- Trying to be creative can also be bad

Theme : Clarity & Simplicity

Color Color

- Use colour that **does not contrast** with the background colour
- Use colour for decoration is **distracting and annoying.**
- Do not use different color for each point
 - Use a different colour for secondary points
- Trying to be creative can also be bad
- Keep a max of 3 colors

Theme : Clarity & Simplicity

Font Type

- If you use a small font, your audience won't be able to read what you have written

○ CAPITALIZE ONLY WHEN NECESSARY. IT IS
DIFFICULT TO READ

○ **Don't use a complicated font**

○ **Don't use funny fonts**

Better ones: Arial, Verdana, Tahoma
Use max. 3 types of font

Theme : Clarity & Simplicity

Font Size

- This is Arial 12
- This is Arial 18
- This is Arial 24
- This is Arial 32
- This is Arial 36
- This is Arial 44
- This is Arial 60

Font Size: Relative
Min Font size: 24 pts (it depends)

Theme : Clarity

This page contains too many words for a presentation slide. It is not written in point form, making it difficult both for your audience to read and for you to present each point. Although there are exactly the same number of points on this slide as the previous slide, it looks much more complicated. In short, your audience will spend too much time trying to read this paragraph instead of listening to you. And the slide is no longer attractive; it looks cluttered. So what is the option left.

Tip: Keep max. white space

Theme : Clarity & Consistency

- Use bulleted points
- Use Telescopic Language
 - Using a font colour that does not contrast with the background colour is hard to read- Bad
 - Use font colours of less contrast- Better
 - Using a different colour for secondary points is also unnecessary- Bad
 - Different colour for secondary points- Better

Follow the 6x6 rule (max 6 bullets, 6 words each)

Theme : Clarity

Show one point at a time:

- Will help audience to concentrate on what you say
- Will help to prevent audience from reading ahead
- Will help to keep your presentation focused
- Will help you to navigate the thoughts of audience

Show one point at a time will help:

- Audience to concentrate on what you say
- To prevent audience from reading ahead
- To Keep your presentation focused
- You to navigate the thoughts of audience

Pressure measurements and Vacuum Classification

	Torr	mbar	Pa	micron	psi	atm
1 Torr	1	1,33	133	1000	$1,9 \times 10^{-2}$	$1,32 \times 10^{-3}$
1 mbar	0,751	1	100	750	$1,4 \times 10^{-2}$	9×10^{-4}
1 Pa	$7,51 \times 10^{-3}$	1×10^{-2}	1	7,5	$1,4 \times 10^{-4}$	9×10^{-6}
1 micron (mTorr)	1×10^{-3}	$1,3 \times 10^{-3}$	$1,3 \times 10^{-1}$	1	$1,9 \times 10^{-5}$	$1,3 \times 10^{-6}$
1 psi (a) (libbre per pollice quadro)	51,72	68,96	$6,89 \times 10^3$	$5,17 \times 10^4$	1	7×10^{-2}
1 atm	760	1013	$1,01 \times 10^5$	$7,6 \times 10^5$	14,7	1

Extreme UltraHigh Vacuum (XHV)
 $\sim 10^{-12}$ mbar

Low Vacuum (LV)
 30 to 10^3 mbar

Medium Vacuum (MV)
 10^{-3} to 30 mbar

Industrials Scope

High Vacuum (HV)
 10^{-3} to 10^{-6} mbar

NB: $P = 10^{-10}$ mbar
 $\sim 10^6$ molecules/cm³
 !!!

Very High Vacuum (VHV)
 10^{-6} to 10^{-9} mbar

Ultra High Vacuum (UHV)
 10^{-9} to 10^{-12} mbar

Particles Accelerator - $P \sim 10^{-8} - 10^{-10}$ mbar

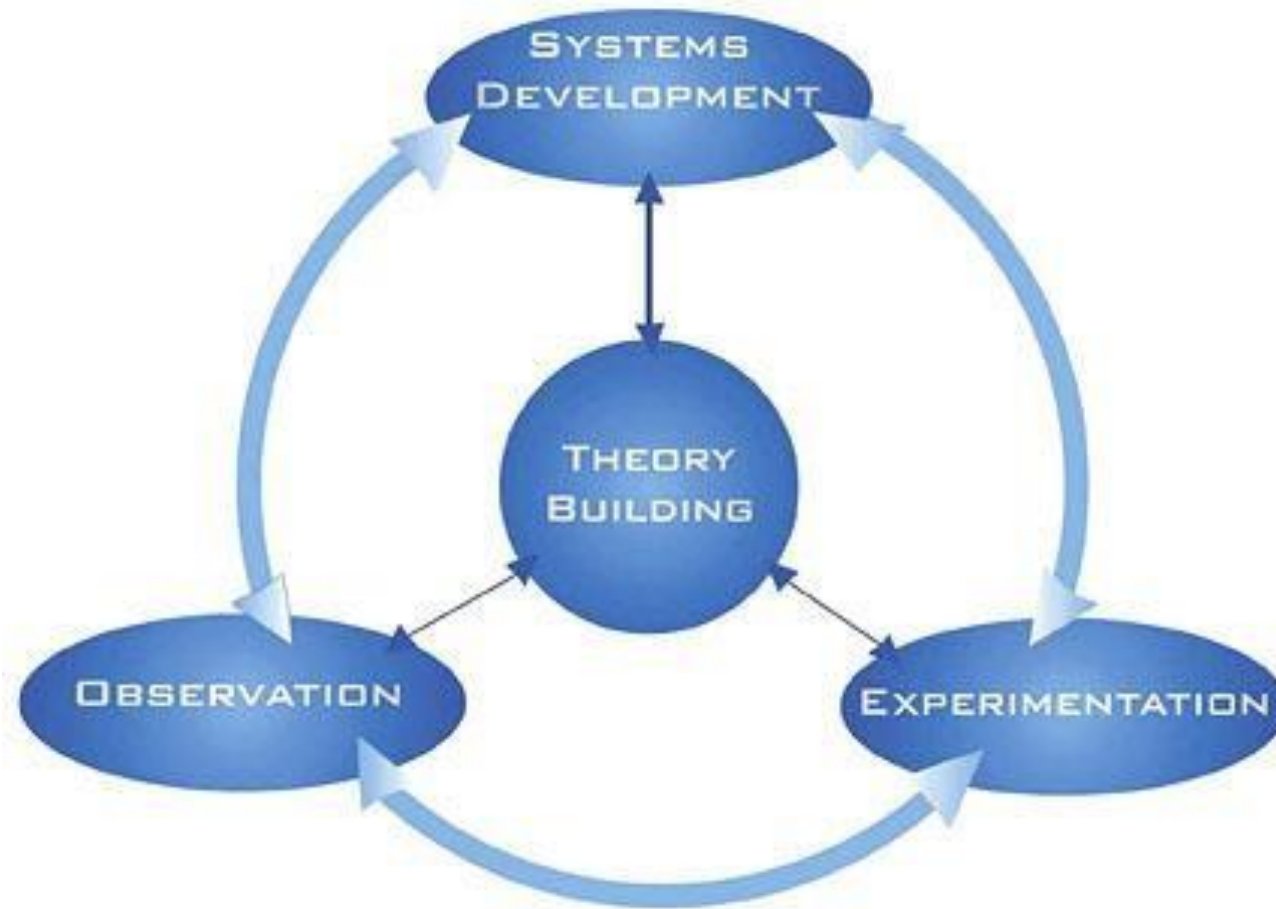

Theme : Simplicity

- Text to support the communication
- Pictures to simplify complex concepts
- Animations for complex relationships
- Visuals to support, not to distract
- Sounds only when absolutely necessary
- Think about the people in the back of the room when creating slides

Less animations the better

Theme : Simplicity

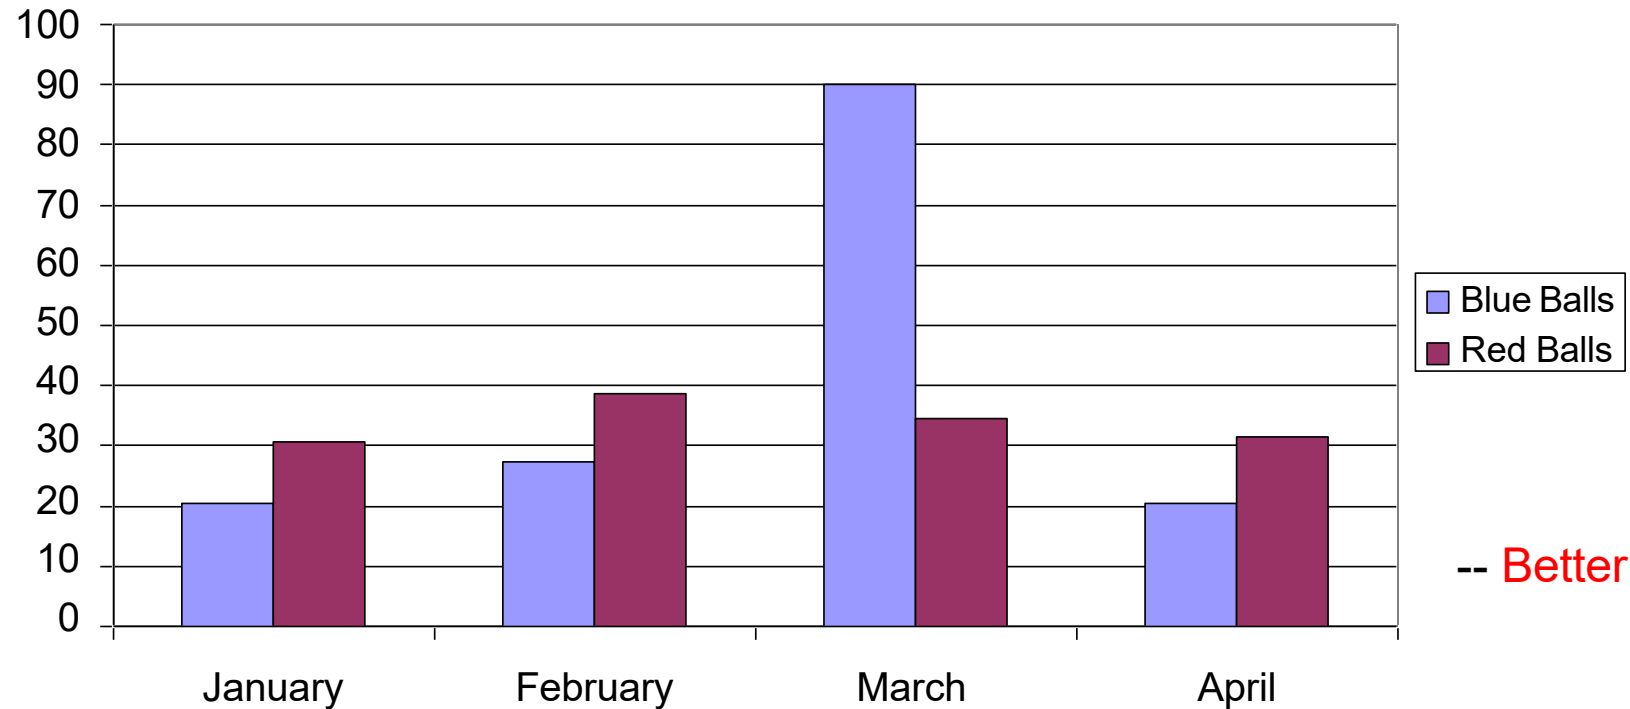

Pictures to simplify complex concepts

Theme : Simplicity & Clarity

	January	February	March	April
Blue Balls	20.4	27.4	90	20.4
Red Balls	30.6	38.6	34.6	31.6

-- Bad

-- Better

Theme: Structured

Typical structure for any research presentation

- Title Page
- Slide Structure Or Outline of the Presentation
- Introduction & Background
- Motivation
- Status of Present Research (Literature Survey)
- Technological Gaps
- Objective(s): Sub objectives
- Methodology
- Results & Discussions
- Conclusions
- Scope for Future Research
- Acknowledgements
- References

What's Important is the flow of thoughts

While presenting

- Know your audience: Never underestimate the audience. A good assessment of audience would be a bonus.
- Have an idea about the sequence of slides: (Avoid back and forth movements between different slides)
- In introduction: Describe background of the work & give credit to previous researchers (Referencing)
- Good to have supporting slides hyperlinked; help answering potential questions.

While presenting

- Speak loudly and clearly with fluctuation
- Modulations are important
- Maintain high energy and good spirit
- Maintain eye contact with your audience
- Make it interactive (if applicable)
- Don't read the slides word-for-word
- Be particular about the time allotted
- Practice your presentation
- Check for **speling mitakes**

Any Questions ??

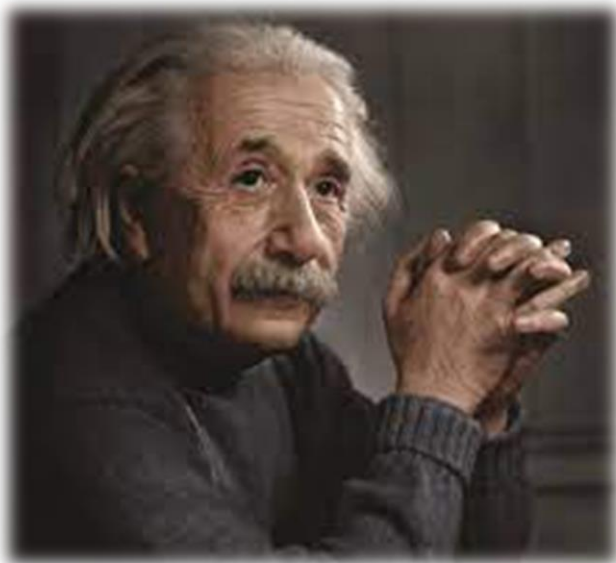

‘Be quick in listening and slow in answering’

- Try to understand the question correctly
- If required ask to repeat the question
- Counter questions graciously
- Don't hurt anyone's ego while answering
- Before finishing, give thanks to all who have helped you in realizing the presentation

Maintain your positive energy till the end
